

Hanzala Saleem Rauf

Web Developer (Full Stack)

hanzalabutt903@gmail.com · pk.linkedin.com/in/hanzala-saleem-128505270 · github.com/HANZALASALEEM · +923207409403

EDUCATION

International Islamic University, Islamabad

Bachelor in Computer Science

Pakistan

08/2020 - 06/2024

WORK EXPERIENCE

JFreaks Software Solutions

Full-Stack Developer

Bahria Town, Lahore

07/2024 - Present

- Currently serving as a Junior Software Engineer, contributing to the development and enhancement of product-based applications like ScreenshotAPI.net and Verid. Key responsibilities include:
- Designing and implementing elegant, responsive UI components using React, Tailwind CSS, and TypeScript.
- Building core scraping, screenshot, and web-change-detection automation using Playwright and Puppeteer for high-accuracy extraction and diffing.
- Developing robust website backends using Node.js and Express.js for server-side logic and API integration.
- Managing client-side data fetching and caching using SWR, React Query, and MobX for efficient state management.
- Integrating secure and scalable payment gateways such as Stripe and Creem for subscription-based access and billing.
- Working with PostgreSQL to handle and query large-scale datasets efficiently.
- Collaborating with the team in Agile sprints, actively participating in planning, stand-ups, and code reviews.

Vespert Tech

Mobile App Developer

Master City, Gujranwala

05/2023 - 09/2023

- Focused on developing mobile applications using React Native, contributing to multiple projects.
- Created applications such as a Travel App and an Income and Loan App, enhancing the product offerings.
- Utilized technologies such as React Native, Firebase, Stylesheets, and React Navigation to deliver functional solutions.

PROJECTS

ScreenshotAPI.net - Built end-to-end (design, code, deployment, content, SEO, marketing) · [screenshotapi.net](#)

- Managed screenshot & page-capture API so teams don't have to run and babysit their own headless-browser fleets.
- Built the full front-end and Node.js/Express backend; render workers on Playwright and Puppeteer for high-accuracy capture.
- Full-page/viewport capture as PNG, JPG, WebP, PDF, MP4, or GIF, with cron scheduling and bulk processing of thousands of URLs.
- 20,000+ built-in ad/cookie-blocking rules and device emulation across desktop, tablet, and mobile viewports.
- Multi-cloud storage (AWS S3, Wasabi, Google Cloud Storage) and subscription billing via Stripe and Creem.

Verid - Built end-to-end (design, code, deployment, content, SEO, marketing) · [verid.dev](#)

- Developer-first web-change-detection API that monitors pages and notifies you only when the change actually matters.
- REST API (OpenAPI 3.1) plus a Node.js SDK, with an automatic escalation ladder: static fetch → headless browser → residential proxy.
- Six extraction methods (CSS, XPath, JSONPath, regex, full-page hash, and AI/LLM) with predicate-based alerting.
- Multi-destination delivery: HMAC-signed webhooks, Slack, Discord, and email.

Also contributed to: WhoisFreaks (WHOIS/DNS/IP intelligence API: frontend & feature work), CurrencyFreaks (real-time exchange-rate API: frontend & SEO), Webscrape AI (no-code scraping tool: frontend and backend).

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS

Frameworks: Node.js, Express.js, React.js, Next.js, React Native

State & Data Fetching: SWR, React Query, MobX

Databases: MongoDB, MySQL, PostgreSQL, Prisma, Sequelize, Firebase

Cloud & Storage: AWS S3, Wasabi, Google Cloud Storage

Tools: Git, Postman, Redis

Other: REST APIs, OpenAPI 3.1, JWT Auth, HMAC-signed Webhooks, Tailwind CSS, Stripe, Creem, Puppeteer, Playwright
